INTRO

Raven has been established by people devoted to snowboarding. Born in the heart of people for whom snowboarding is a passion, focus and life style. We remain true to snowboarding, and we thank you all for the support so we can continue to do so.

Our goal is to develop the best value for money boards on the market. We believe that the quality is something you can not replace with anything else. That is why we decided our boards to be produced in Europe in one of the world's leading factories – NBL Sport. All our boards are 100% hand made. This is what makes our boards so unique and ensures maximum performance and superior quality.

Another thing which makes our boards unique is the fact that most companies throw a middle-of-the-road board together and call it “all-mountain” because it’s nonspecific, but ours are specifically designed to tame any terrain. If you drop cliffs and crush giant tables all in the same run, our boards will be definitely the best choice for you.

SNOWBOARDS ➡

SNOWBOARDS TECHNOLOGIES

CORE

POPLAR WOOD CORE

Super strong, super light, low moisture ratio core. You may believe us or not but we really do control precisely every single tree before it's changed into vertically laminated wood strips. This ensures each board has exactly the same amount of pop and flex. The German glue used for gluing the wood strips is made of only the best natural components and this is the reason why our boards never delaminate and it makes our boards eco-friendly.

ABS SIDEWALL

Sidewall structure is responsible for the power to the edges. It also supports and reinforces the top edge and absorbs shocks. In order to better protect the core against external damages and penetrating the moisture into the core, our sidewalls are made only from the best quality high molecular bonding ABS produced in Austria. Our long time experienced showed that a 30 degrees sidewalls we use in all our snowboards increase power transfer over the edge and offer better vibration damping.

LAMINATION

HIGH DENSITY BIAx FIBERGLASS

Our lightweight high density premium biaxial laminates not only possess all the advantages of our standard biaxial laminates but also provide additional stability, offer over 10% more pop and over 5% more torsional and longitudinal stiffness comparing to the standard laminates.

TRIAx FIBERGLASS

Light-weight, multi axis, stitched fiberglass laminate that provides excellent torsional and longitudinal rigidity, great pop and response for a precise controlled ride.

PROFILE

CLASSIC CAMBER PROFILE

Our classic camber snowboards have 15 mm of camber underneath. It offers a very good edge control. The camber shape provides precision turning on finely groomed runs of hard-packed snow but also offers increased hold in the half pipe as it can bend with the curvature of the ramp walls. The unique shape of the camber snowboard has the ability to absorb the landing impact of high-altitude tricks.

CAMROCKER PROFILE

Micro camber between the bindings, with rocker in the tip and tail from the bindings out. One of the key advantages this board profile is its advanced performance on slopes that are covered with freshly fallen snow. The unique shape of our 3-Stage Rocker design permits the snowboard to rock back and forth during jibbing tricks but it's also great for beginners as it helps prevent you from catching an edge.

FLATROCKER PROFILE

Flat section between the bindings, with rocker in the tip and tail from the bindings out. The flat part of the board offers better edge grip than rocker and better maneuverability than camber. The rocker sections bring the tip and tail up and off the snow, shortening the contact length of the edges and making turns easier. Your ride becomes more nimble and maneuverable. You can slash the snow, slide sideways to scrub speed, smear and butter turns.

FLAT PROFILE

Flat, also called zero camber, combines the benefits of both – rocker and camber. It makes easy transitions, with better edge grip than rocker and better maneuverability than camber. It's a versatile option, super stable for riding rails, due to the flat surface between the bindings. It requires less ollie force to get it in the air compared to a traditional board.

FULL ROCKER PROFILE

Full Rocker, It's a good choice for those riders who like riding in the park. It's a versatile option, super stable for riding rails. It requires less ollie force to get it in the air compared to a traditional board, is more manoeuvrable and less likely to catch an edge.

REVERS CAMBER PROFILE

The lowest point of the profile is the center of the board and both tips raise from the snow. There are many benefits of riding such a camber. The contact points raise above the snow and make the board less likely to catch an edge. The board feels more forgiving and pivots easily. Turn initiations are smoother and powder floatation is enhanced. Reverse cambers are also great for freestyling. They boost the playful feel and make pressing and jibbing easy.

SHAPE

DIRECTIONAL SHAPE

The binding inserts are set back, the flex is uneven, the sidecut is progressive, the tip and tail are different width and length.

TWIN SHAPE

The binding inserts are set back, the flex is even, the sidecut is radial, the tip and tail are exactly the same width and length.

DIRECTIONAL TWIN SHAPE

The binding inserts are set back, the flex is even, the sidecut is radial, the tip and tail are exactly the same width but the nose is longer than the tail.

TRUE TWIN SHAPE

A true twin shape means the board is 100% symmetrical – the stance is centered, the flex is even, the sidecut is dual-progressive, the tip and tail are exactly the same width and length.

REINFORCEMENT

CARBON STRINGERS

Carbon stringers are added to selected models to improve pop, torsional stiffness and to add response to your edges and your ollies.

EXTRUDED BASE

Extruded bases are easy and cheap to maintain. They do not need to be waxed much. We only use the best quality Austrian bases made by the leading company – Isosport.

BOARD FLEX

Our board flexes are based on a scale of soft – stiff

STYLE PINK

ALLMOUNTAIN / FREESTYLE ♀ LADIES

According to Charles Bukowski 'style is the answer to everything'. Some people ride with natural style, others work hard to get it. But in either the right equipment helps, which is why we created the Style. Style is a universal snowboard with a flatrock profile that is great for riding. In addition, it's got additional biax lamination layer in both tips, which help you progress in the park and will bring you joy on powder days.

SOFT BOARD FLEX

VENUS

ALLMOUNTAIN / FREESTYLE ♀ LADIES

Exactly as soft as Infinity and built with the same flatrock profile, Venus is well-suited to female riders. It's a perfect board for those learning the basis and who don't yet know what turns them on most: park, powder or piste. Venus is a versatile board that let's you try everything. Every year it has the most fashionable colors but this season it's also eco-friendly with a polycarbonate laminate topsheet instead of traditional lacquered topsheet. This makes the Venus lighter than traditional boards, but also extra hard and difficult to scratch, whilst being good for the planet.

SUPREME

BLACK/MINT

ALLMOUNTAIN / FREESTYLE ♀ LADIES

If the Raven Relict is a little bit too stiff for you, then ride a Supreme. It's got a flatrock profile, but it's a bit softer in flex, which makes it a perfect choice if you ride piste as much as the park. Instead of the traditional environmentally unfriendly lacquered topsheet, Supreme has a polycarbonate laminate, which is light, extra hard and difficult to scratch. Making the Supreme both environmentally friendly, and lighter than most traditional boards.

BARRACUDA CARBON LIME

ALLMOUNTAIN / FREESTYLE ♂ MENS

A fearsome predator, with its aggressive makeup “The Barracuda” hunts down terrain with its twin-tip design. A cam rocker profile and full poplar core give this beast its edge when jibbing and freestyle are its main objectives. Four carbon stripes intensify its super light explosive pop making “The Barracuda” our most modern freestyle board synonymous with its point of inspiration.

SUPREME

BLACK/GREEN

ALLMOUNTAIN / FREESTYLE ♂ MENS

If the Raven Relict is a little bit too stiff for you, then ride a Supreme. It's got a flatrock profile, but it's a bit softer in flex, which makes it a perfect choice if you ride piste as much as the park. Instead of the traditional environmentally unfriendly lacquered topsheet, Supreme has a polycarbonate laminate, which is light, extra hard and difficult to scratch. Making the Supreme both environmentally friendly, and lighter than most traditional boards.

MEDIUM SOFT BOARD FLEX

SOLID STEEL

ALLMOUNTAIN / FREESTYLE ♂ MENS

On a mission to offer beginner riders the ultimate freestyle board, Raven came up with the Solid - an urban rail killing, park and all-mountain shredding, bad-ass freestyle board. A soft poplar core makes it forgiving for beginners or anyone new to the park and pipe scene.

CORE

ALLMOUNTAIN / FREESTYLE ♂ MENS

If we had to choose one board to ride all season from this year's collection it would be the Core. It's has a medium-flex that's great for riding at high-speed, in deep powder and is fun in the park. The Core is available in two versions: classic and carbon. The classic is a perfect choice for those taking their first steps in snowboarding or who only hit the slopes from time to time. It also offers additional contact points (Ultra Edge Hold Technology) along the edge for best available edge hold. Carbon is for more experienced riders who need one board for all conditions.

PULSE

ALLMOUNTAIN ♂ MENS

This year Pulse appears in our collection as a camrocker board for fast riding on and off piste. No other profile combines great float in powder and good edge hold better than the camrocker. We could leave it there but then you wouldn't know that unlike many boards of this sort, Pulse has a nice, medium flex which is fun to ride but won't tire you out.

BINDINGS

BINDINGS TECHNOLOGIES

HIGHBACK

REAR ENTRY

Often called speed entry, allows you to quickly and easily get in your bindings. Simply open the highback, slide your foot in and then close the highback on your boot.

HIGHBACK FORWARD LEAN ADJUSTMENT

With this system you have more control over response of your bindings. The more you lean the highback forward, the more response you will get.

HIGHBACK ROTATION ADJUSTMENT

Rotate your highbacks to achieve maximum response and comfort.

SYMMETRICAL HIGHBACK

Classic symmetrical highback.

ASYMMETRICAL HIGHBACK

With these bindings you will get the most comfort and response when using the 'ducked' stance, when your feet are not parallel, but slightly pointing towards the nose and tail of the board.

BUCKLES

ALUMINIUM BUCKLES

Buckles made with very durable, ultra-lightweight aluminum.

COMPOSITE BUCKLES

Buckles made with durable, lightweight composite material.

MICRO BUCKLES

Fluent adjustment system allows you to get the perfect fit.

MOUNT SYSTEM

4X4 MOUNT SYSTEM

Standard mount system where holes are 4 cm apart. Uses a 4 hole disc binding.

3D MOUNT SYSTEM

Burton standard that requires a 3 hole disc binding.

THE CHANNEL MOUNT SYSTEM

The newest Burton standard that utilizes a rail to mount the binding.

TOE STRAP

CLASSIC TOE STRAP

Standard strap that holds the boot from the top.

CAP-STRAP

Toe cap wraps around the front of your boot reducing pressure points and giving more response.

MULTI CAP-STRAP

These straps can be set in both positions: classic 'over the top' or modern 'over the toes'. You can adjust them to your personal preference.

3D ULTRALIGHT TECH CAP-STRAP

3D shape for the perfect fit with reduced weight for maximum response.

3D ULTRALIGHT TECH CAP-STRAP 2.0

3D reinforced shape for the perfect fit with reduced weight for maximum response.

3D ADVANCED FIT CAP-STRAP

3D shape that eliminates pressure points for enhanced comfort.

ANKLE STRAP

3D ANKLE STRAP

3D shape that eliminates pressure points for enhanced comfort.

INVERTED ANKLE STRAP

Comes with the seam on the outside providing more comfort.

DOUBLE FLEX TECHNOLOGY

Flip the strap upside down to switch the upper and lower stiffness levels and optimize it to your personal needs.

ULTRALIGHT ANKLE STRAP

Reduced weight for maximum response.

MOUNTAIN ANKLE STRAP

Wide strap with extra support, optimized for big mountain riding.

BASE

ALUMINIUM BASE

Base made with very durable, ultra-lightweight aluminum.

COMPOSITE BASE

Base made with durable, lightweight composite material.

FOOT BED RUBBER PADS

Rubber pads provide grip and cushioning.

FULLY PADDED FOOT BED

Foot bed fully padded for maximum cushioning and comfort.

GAS PEDAL

ADJUSTABLE FRONT/REAR GAS PEDAL

Adjusting gas pedals lets you accommodate larger boots, reducing toe drag and giving more power and response.

ADJUSTABLE HEEL CUP

Heel cup that provides an easy way to center your boots over the board.

BINDING FLEX

The flex of your bindings should correspond with the flex of your boots and snowboard. Choose one based on your riding style!

RAVEN S230 CLASSIC SERIES

ALLMOUNTAIN/FREESTYLE UNISEX
